Education

Indian Institute of Information Technology, Gwalior

Dec 2020 – May 2025

Dual Degree in Bachelor of Technology (IT)

Experience

Software Engineer

Dec 2024 – Present

Flagright (YC W22) | [Homepage](#)

Bangalore, KA

- Led the migration from MongoDB to a hybrid **DynamoDB + ClickHouse** architecture across **50** tenants (10M+ records each) with **zero downtime**, reducing infrastructure costs by **4x**.
- Re-architected data access using **CDC** to route real-time reads through DynamoDB and stream writes to ClickHouse while maintaining transaction-monitoring API latency.
- Optimized analytics using ClickHouse **materialized views** and tenant-isolated row-level policies, improving dashboard performance and reducing redundant write operations across **50** tenants.
- Extended the AWS deployment pipeline (**CodePipeline, CodeBuild, Terraform**) to deploy the console and API into **customer-owned AWS accounts** for enterprise data residency.
- Built a **bi-directional CRM integration** with **Nango**, syncing tickets, users, and CRM records from **900+** third-party apps into the Flagright console.
- Developed a scalable data ingestion pipeline integrating with **third-party screening providers**, automating daily synchronization of screening data into **OpenSearch** and maintaining search latency below **100ms**.

Software Engineer Intern

July 2024 – Nov 2024

TurboHire | [Homepage](#)

Hyderabad, TS; Remote.

- Developed an end-to-end **candidate verification workflow** by integrating a **third-party Aadhaar verification API**, enabling recruiters to generate enquiry forms and automate identity verification.
- Engineered a scalable **CSV ingestion pipeline** supporting bulk import of jobs, candidates, assessments.
- Built a **QR code-based hiring workflow** enabling recruiters to create shareable application links for campus and walk-in drives, simplifying candidate onboarding for large hiring events.

Technical Skills

Languages: Java, C/C++, JavaScript, TypeScript, Go (Golang), Python, Bash.

Frameworks & Technologies: Node.js, Express.js, Spring Boot, React.js, Next.js, REST APIs, Docker, Terraform, Kafka, RabbitMQ, AWS Lambda, AWS SQS, AWS Fargate, Azure Functions, Firebase, Git, Linux, Grafana.

Databases: MySQL, PostgreSQL, Microsoft SQL Server (MSSQL), MongoDB, DynamoDB, ClickHouse, Redis.

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP).

DevOps & CI/CD: GitHub Actions, GitLab CI/CD, Bitbucket Pipelines.

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design, Distributed Systems, Microservices, Event-Driven Architecture, Multithreading, Concurrency, Design Patterns.

Projects

Local Torrent - File Sharing in LAN | *Java, Spring Boot, React.js,*

- Implemented a **local Torrent application** in **Java** using **Socket Programming** and **Java NIO (Channels and Selectors)**, enabling scalable, non-blocking peer-to-peer file sharing across multiple concurrent connections.
- Developed a web-based interface using **Spring Boot** for file discovery, upload, and download management, providing seamless integration with the backend socket services.
- Ensured **thread safety** and data consistency by implementing **Mutex-based** synchronization for shared resources.
- Designed asynchronous communication between the HTTP server and socket server using **LinkedBlockingQueue**, decoupling request processing and improving concurrent task handling.

Achievements / Positions of Responsibility

- Led **GDSC-IIITM** (Google Developer Student Clubs) as **Cloud Computing Head** for one year.
- Solved over 1,000+ DSA problems on LeetCode and GeeksforGeeks
- Facilitated a **2-day Git & GitHub workshop** for **150+** students at **IIITM**.
